Plenty of folks think that web design is all about slapping some words and pictures together and posting them online. No doubt that sort of attitude has created some of the atrocious and non-working web sites we see out there. At Digital technology for web services, we know that web design involves a lot of work - and we're not scared to roll up our sleeves . When we design a web site for you, we:

Work out navigational issues. We want to make sure that your customers and clients can easily find what they are looking for. That's why we figure out what customers and clients are looking for on your web site - and then make sure that they can find what they need easily. This helps ensure that clients are perfectly happy with your web site.

Work out usability issues. We want your web site to be easily accessible to everyone, which is why we make sure that it works for vision impaired and hearing impaired users as well. We also consider all the possibilities - that someone is viewing your site on a tiny cell phone, on a slow Internet connection, or on an obscure computer system. Our Digital technology for web services team really twists itself into a pretzel to ensure that everyone can see your web site perfectly. That must be one reason why we are champions at Twister - and why our web sites get outstanding results for our clients.

We design a great site, using all the tools available. Photoshop, tablets, HTML, Illustrator, caffeine - we use all the latest and most established technology to create a web site that is visually appealing and yet fully functional. And we listen to you when you give us feedback and ideas, so that we create the web site you want - just not any web site.
